Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 23-28 and 34-38, drawn to an object system having a state change registration and notification system, classified in class 719, subclass 318.

II. Claims 29-30 and 39-40, drawn to an object development system, classified in class 717, subclass 140.

III. Claims 31-33 and 41-43, drawn to a system of managing object system at runtime, classified in class 719, subclass 316.

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each invention has separate utility such as:

- Invention I: allowing clients to register for state changes and to receive notifications regarding these state changes within an object system.
- Invention II: compiling code from one level to another level for executing operations performed within an object system.
- Invention III: defining object templates within an object system wherein such templates are being used to instantiating objects at runtime.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
